

Administrating Mule Enterprise Applications (MA-2.x)

Course Summary

This course provides a practical grounding in the administration and troubleshooting of enterprise applications developed using Mule 2.x. It provides an understanding of the manners in which Mule 2.x applications can be deployed and goes on to provide an in-depth understanding of how to troubleshoot and maintain existing Mule 2.x applications

The course concludes with an explanation of monitoring techniques based upon the industry standard Java Managed Extensions (JMX) technology and how this is built into Mule 2.x

Course Objectives

After attending this module, a delegate will be able to:

- Know how to deploy Mule 2.x for use
- Know how to deploy a Mule 2.x application for use.
- Understand the Mule 2.x log entries
- Know how to handle Mule 2.x error messages.
- Know how to configure a Mule 2.x application to use JMX
- Know how to monitor and manage a Mule 2.x application remotely

There will be question and answer sessions periodically during the course where delegates will have the opportunity to discuss questions and issues relevant to their own planned work with Mule 2.x.
